

The OMNIA® family of hardware solutions is an enhancement of the IllumiCore® product line. It features all of the high quality components and performance of IllumiCore®, with a significant upgrade in installation friendly features.

OMNIA® supersedes the IllumiCore® line as our standard offering of hardware and is fully backward compatible with existing IllumiCore® products. OMNIA® enclosures feature a rear mounting plate with keyhole cuts, which mate with multiple corresponding cable management pieces to give each user complete individual preference for installation. Included management pieces are a compliant cable holder, compliant cable router, and the plate will also mate with a pre-terminated trunk cable breakout kit. Each piece slides and locks into place using a compliant mechanism, and is easily installed or removed without the use of a tool.

The plate has multiple key rows and positions for management pieces to be installed. Fiber can be routed on solely one side of the enclosure, or both sides. Cable strain relief brackets are also included and can be installed internally or externally in the rear of the enclosure. Enclosures are fully compatible with the IllumiCore® Classic panels and modules. The standard stocked enclosures are Classic, PRM and LGX compatible are also available.

OMNIA® Rack Mount, ORDERING INFORMATION

OMNIA1C
